

Student's Research Adventure - 2008

Sarah Nelson in Cambridge

Here are two pictures. The first is of me outside of **The Eagle Pub in Cambridge**. The Eagle is just down the road from where I work and is the place where Watson and Crick first announced their discovery of the structure of DNA. The second picture is from a weekend trip I took to Geneva in front of the largest fountain of water in the world, and of course accompanied by a soccer ball as Switzerland (with Austria) is currently hosting the European Cup - a really big soccer tournament.

The research I am doing at the moment has to do with investigating new cancer imaging techniques by exploiting metabolic processes known to be changed within cancer cells and I am working for **Dr. Brindle, a professor of Biochemistry at Cambridge.**

ALSO! an aside, my lab group made the cover of nature, and the issue was published on June 12, 2008 and is in Volume 453 Number 7197, pp 823 - 956.
